Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Anthers were harvested and pooled from early meiosis to late meiosis. The tissue, total RNA, and poly(A) RNA were prepared (Butler, Ross and Gustafson) at University of Missouri, Columbia. A cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              980
                                       The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

ECORI; Site_2: XhoI; mRNA was purified from 2 x 10E3
rhabditiform larvae which had been isolated from gerbils
experimentally infected with larvae originally isolated
from experimentally infected dogs. cDNA was constructed
and, using adaptors, was cloned unidirectionally into the
vector from the ECORI site to the XhoI site. The library
has an unamplified titer of 1 x 10E5 pfu/ml and an
amplified, undiluted titer of 9 x 10E11 pfu/ml. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              average insert size of the unamplified library is 675 bp (range, 100-1700)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           California, Riverside. The CDNA clones were in vivo excised to give pBluescript phagemids before normalization was carried out. The mass excision of phagemid library and normalization were done in HT Nguyer lab by D. Zhang at Texas Tech University. Normalization protocol used was that of Soares. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
/7:450,). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequencing: A Practical Approach, eds. The pullulanse hydrolyses alpha-1,6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylase) for saccharification of starch. Typical applications include use as anti-staling additives in bread making and brewing, in preparation of low calorie foods and to clarify fruit juices.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents Bacillus deramificans strain TR9.117D mature pullulanase (EC-3.2.1.41). This enzyme has a pI of CC 4.1.4.5, has a half-life of about 55 hr at 60 deg C and is capable CC of catalysing the hydrolysis of alpha-1.6-glucosidic bonds in CC amylopectin and pullulan. The invention relates to the discovery CC that B. deramificans pullulanase recombinantly produced in a Bacillus host is modified yet retains the ability to catalyse the CC hydrolysis of an alpha-1.6-glucosidic bond. The modification of CC the recombinant pullulanase appears to be a result of misprocessing CC of the signal sequence by a signal peptidase as well as CC susceptibility to extracellular proteolytic processing. The CC invention provides modified pullulanases, especially N-terminally CC truncated B. deramificans modified pullulanase (see Y31747-48), CC nucleic acids encoding them, vectors, host cells and methods for CC recombinant production. The modified pullulanase sare useful in CC the starch industry for the saccharification of aqueous liquefied CC starch, forming syrups of high glucose and maltose content. Other CC uses (not claimed) are: as anti-staling additives in bread; in CC tertaholosides from maltose; to condense monor or of of other cCC amylose is used as substitute for fat); to clarify fruit juices; CC in the preparation of oligosaccharides from amylopectin or of tertaholosides from maltose; to condense monor or oligosaccharides, cc or in the pharmaceutical industry (no details). When used for Starch saccharification, the modified pullulanases reduce the amounts of by-products, especially they provide higher glucose CC reversion reaction products. When used with glucoamylase, they can be considered and productivity and a more central process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the mature pullulanase enzyme isolated from Bacillus deramificans T 89.117D. The pullulanse hydrolyses alpha-1,6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylase) for saccharification of starch. Typical applications include use as anti-staling additives in bread making and brewing, in preparation of low calorie foods

```

This sequence represents a pullulanase amino acid sequence. Pullulanases CC are debranching enzymes which can attack amylopectin. This sequence represents a parent enzyme from which genetically engineered variant compresents a parent enzyme from which genetically engineered variant compresents apparent enzyme from which genetically engineered enzyme has an improved thermostability at a pH in the range of 4-6 compared to the comparent enzyme. The modified enzyme may alternatively or also have an increased activity towards amylopectin and or glycogen compared to the comparent enzyme. This is useful when starches such as corn, potato, wheat, compared to the corner sugars. This is useful when starches such as corn, potato, wheat, compared to the corner sugars. This is useful when starches such as corn, potato, wheat, compared to the corner sugars, such as high fructose syrup, high maltose syrup, maltodextrins, amylose, 64-66 oilgosaccharides and other coarbonydrates such as fat replacers. The thermostable debranching enzymes of the invention make it possible to perform liquefaction and debranching the thermostable debranching using the thermostable debranching using the thermostable debranching using the thermostable debranching the pancer of pance precursors with the action of an alpha-amylase, the formation of pance precursors ciscustable debranching enzyme variants during liquefaction together with the action of an alpha-amylase, the formation of pance precursors.

RESULT
Y31747
 pullulanase of Bacillus deramificans strain T89.1170, comprising CC amino acids 99-928 of the native mature enzyme (see Y31746). The cannot acids 99-928 of the native mature enzyme (see Y31746). The CC native mature pullulanase (EC-3.2.1.41) has a pI of 4.1-4.5, a CC half-life of about 55 hr at 60 deg C and is capable of catalysing CC the hydrolysis of alpha-1,6-glucosidic bonds in amylopectin and cc pullulan. The invention relates to the discovery that B. CC deramificans pullulanase recombinantly produced in a Bacillus host CC is modified yet retains the ability to catalyse the hydrolysis of CC an alpha-1,6-glucosidic bond. The modification of the recombinant CC pullulanase appears to be a result of misprocessing of the signal CC sequence by a signal peptidase as well as susceptibility to extracellular proteolytic processing. The invention provides CC modified pullulanases, especially N-terminally truncated B. CC deramificans modified pullulanase, nucleic acids encoding them, CC vectors, host cells and methods for recombinant production. The condified pullulanases are useful in the starch industry for the saccharification of aqueous liquefied starch, forming syrups of CC anti-staling additives in bread; in brewing low calorie beers; CC anti-staling additives in bread; in the processis used as substitute CC carefity for first the vices: in the preparation of

When used with glucoamylase, they make possible a higher level of dissolved solids in the material being treated, resulting in increased productivity and a more energy efficient process.

Note: The present sequence is not shown in the specification but is derived from the B. deramificans pullulanase sequence given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                              CC The present sequence represents an N-terminally truncated pullulanase of Bacillus deramificans strain T89.117D, comprising CC amino acids 103-928 of the native mature enzyme (see Y31746). The CC native mature pullulanase (EC-3.2.1.41) has a pi of 4.1-4.5, a CC the hydrolysis of alpha-1.6-glucosidic bonds in amylopectin and CC the hydrolysis of alpha-1.6-glucosidic bonds in amylopectin and CC pullulan. The invention relates to the discovery that B. CC deramificans pullulanase recombinantly produced in a Bacillus host CC an alpha-1.6-glucosidic bond. The modification of the recombinant CC pullulanase appears to be a result of misprocessing of the signal CC sequence by a signal peptidase as well as susceptibility to extracellular proteolytic processing. The invention provides CC modified pullulanases, especially N-rerminally recombinant
modified pullulanases, especially N-terminally truncated B.

deramificans modified pullulanase, nucleic acids encoding them,
vectors, host cells and methods for recombinant production. The
modified pullulanases are useful in the starch industry for the
saccharification of aqueous liquefied starch, forming syrups of
high glucose and maltose content. Other uses (not claimed) are: as
anti-staling additives in bread; in brewing low calorie beers;
production of low calorie foods (where maylose is used as substitute
for fat); to clarify fruit juices; in the preparation of
oligosaccharides from amylopectin or of tetraholosides from maltose;
to condense mono- or oligosaccharides, or in the pharmaceutical
industry (no details). When used for starch saccharification, the
modified pullulanases reduce the amounts of by-products, especially
they provide higher glucose yields in short reaction times, without
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note=

When used with glucoamylase, they make possible a higher level of dissolved solids in the material being treated, resulting in increased productivity and a more energy-efficient process.

Note: The present sequence is not shown in the specification but is derived from the B. deramificans pullulanase sequence given in

APC-9603. The present specification also describes: (1) a vector containing the DNA encoding a trimmed enzyme; (2) a recombinant microbe transformed by the DNA; and (3) preparation of a trimmed enzyme in which the microbe of (2) is cultured and the trimmed enzyme is collected from the culture. The method can prepare a trimmed enzyme of wide substrate specificity having heat resistance and being active in acid region efficiently.
                                                                                                                                                                                                                                                                                                                                                                                                 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bacillus sp. parent enzyme. The modified enzyme may alternatively or also have an increased activity towards amylopectin and or glycogen compared to the parent enzyme. The enzyme variants are useful for converting starch to one or more sugars. This is useful when starches such as corn, potato, wheat, manioc and rice starch are used as starting materials in commercial large scale production of sugars, such as high fructose syrup, high maltose syrup, maltodextrins, amylose, C4-C6 oligosaccharides and other carbohydrates such as fat replacers. The thermostable debranching enzymes is full taneously before the saccharification step. By debranching using the thermostable debranching enzyme variants during liquefaction together with the action of an alpha-amylase, the formation of panose precursors is reduced, thereby reducing the panose content in the final product and increasing the overall saccharification yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a pullulanase amino acid sequence. Pullulana are debranching enzymes which can attack amylopectin. This sequence represents a parent enzyme from which genetically engineered variant debranching enzymes can be created. The genetically engineered enzyme an improved thermostability at a pH in the range of 4-6 compared to the particular of the parti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              thermostability, used for converting starch from potatoes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       멍
This is the amino acid sequence of pullulanase 6GP3, deduced from an isolated polynucleotide (see v36920) of a Thermotoga maritima clone (5GP3) that grows optimally at 85 degC. The sequence shows 72% amino acid identity to an alpha destrom 6 glucanohydrolase of Caldocellum saccharolyticum. The invention provides 18 polynucleotides (see v36907-24) coding for thermostable glycosidases (see w49858-75) having glucosidase, alpha-galactosidase, beta-mannastable, endoglucanase beta-galactosidase, beta-mannase, endoglucanase or pullulanase activity. Vectors and host cells are also claimed. A method is provided for producing the enzymes by recombinant techniques. A claimed method for generating glucose from soluble
                                                                                                                                                                                                                                                                                                                                                                                        Glycosidase enzymes from organisms of the genera Staphlothermus, Pyrococcus and Thermococcus - for deriving sugar from oligosaccharides, useful in the e.g. food processing, textile or baking industries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1998-362407/31.

The enzyme or its encoding nucleic acid sequence is used for generating glucose from soluble oligosaccharides. The enzyme can be used in the food processing, pharmaceutical, textile, detergent and baking industries. The enzyme is also used to treat lactose intolerance, as a diagnostic reporter molecule, in corn wet milling or in the fruit juice industry. The enzymes can be used to hydrolyse guar gum to remove non-reducing terminal mannose residues. The nucleic acids encoding the enzyme may be used to generate probes to identify similar sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New thermostable glycosidase(s) - from Thermococcus, Staphylothermus and Pyrococcus, used in the textile, food processing, pharmaceutical, detergent and baking industries

No. 17437/88) was cleaved by various restriction enzymes and inserted into plasmid pVI18/119. Single-stranded DNA was prepd. using helper phage M13K07 and the base sequence determined by the dideoxy method.

                                                                                                                                                                                                                                                                                           This sequence represents the Bacillus pullulanase protein. The invention relates to a mutant pullulanase in which at least one methionine residue in the pullulanase is deleted or replaced by an optional amino acid residue other than Cys and Met and/or at least one alanine residue in the amino acid residues constituting pullulanase is deleted or replaced by an optional amino acid residue other than Ala. The mutant pullulanase is useful in bleach-containing detergents. The pullulanase is highly

Amylopullulanase (W09255) of Bacillus sp. isolate KSM-AP1378 ha. N-terminal alkaline alpha-amylase moiety (see also W09256) and C-terminal alkaline pullulanase moiety (see also W09257). It is the product of an open reading frame in a DNA fraggment (747878) isolated using shotgun cloning and PCR (see also T47879-84).
                                                                 DNA encoding alkaline pullulanase having alkaline alpha-amylase activity - useful for improving the efficacy of dish washing detergents and detergents for clothes, esp. on starch soils
                                                                                                                              Ara

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
